

ShareUp v2, populated: 3 accounts, 4 events, 8 expenses

A bigger walkthrough than before, sized to actually exercise every table: two account owners with separate friend lists, an event with sharing off, one view-only, one editable, an excluded expense, a multi-photo receipt, and cross-friend settlements. IDs are small integers here (matching v2's `bigserial` keys) instead of UUIDs.

Mickey Mouse

admin · account 1
owns 3 events, 5 friends

Minnie

user · account 2
owns 1 event, 2 friends

Donald

user · account 3 · disabled
no events — locked out example

Identity & access

Three accounts, one disabled. Each keeps a private friend list — Mickey's and Minnie's never overlap.

accounts

registered users

3 rows

ID	NAME	USERNAME	ROLE	STATUS	EMAIL
1	Mickey Mouse	admin	1 · admin	1 · active	mickey01mickey@gmail.com
2	Minnie	minnie	0 · user	1 · active	minnie@example.com
3	Donald	donald	0 · user	0 · disabled	donald@example.com

Donald's status = 0 — he can't sign in until an admin flips it back to 1.

friends

who each account can split expenses with

7 rows

ID	ACCOUNT_ID	NAME	IS_SELF
1	1	Mickey (Me)	true
2	1	Nan	false
3	1	Ploy	false
4	1	Tar	false
5	1	Beam	false
6	2	Minnie (Me)	true
7	2	Gap	false

Friend ids 1–5 belong to account 1 (Mickey); 6–7 belong to account 2 (Minnie) — the two lists never mix.

sessions

active login tokens

2 rows

TOKEN	ACCOUNT_ID	INFO	EXPIRES_AT
a1f9...e02c	1	{"name":"Mickey Mouse","role":1}	2026-10-17 09:12
8b3d...4f10	2	{"name":"Minnie","role":0}	2026-10-12 21:40

Donald has no row here — disabled accounts can't hold a session.

Events & ledger

Four events across two owners, in three different sharing states, with eight real expenses between them.

events

sharing lives on the row now

4 rows

ID	ACCOUNT_ID	NAME	ICON	SHARE_TOKEN	SHARE_PERM
1	1	Phuket Trip	🌴	7f3a...91be	0 · view
2	1	Office Lunch	🍽️	null	null
3	1	Chiang Mai Weekend	🏕️	c92e...40aa	1 · edit
4	2	Girls Night Out	🍸	null	null

Event 2 and 4 have share_token = null — sharing was simply never turned on. No separate row to manage anywhere else.

transactions

exclusion lives on the row now

8 rows

ID	EVENT_ID	PAYER_ID	AMOUNT	DESCRIPTION	EXCLUDED_AT
1	1	1 (Mickey)	3,200.00	Hotel — 2 nights	null
2	1	3 (Ploy)	850.00	Dinner — seafood	null
3	1	2 (Nan)	1,200.00	Scooter rental	null
4	2	2 (Nan)	340.00	Pad thai lunch	2026-09-01 12:20
5	3	1 (Mickey)	4,500.00	Airbnb — 3 nights	null
6	3	5 (Beam)	680.00	Night market food	null
7	3	4 (Tar)	1,500.00	Songthaew charter	null
8	4	6 (Minnie)	960.00	Cocktails & bar bill	null

Row 4 has a real excluded_at timestamp — Nan was paid back in cash on the spot, so it's skipped in settlement math. No join to a second table needed to know that.

TRANSACTION_ID	FRIEND_ID	AMOUNT
1	1 (Mickey)	800.00
1	2 (Nan)	800.00
1	3 (Ploy)	800.00
1	4 (Tar)	800.00
2	1 (Mickey)	212.50
2	2 (Nan)	212.50
2	3 (Ploy)	212.50
2	4 (Tar)	212.50
3	1 (Mickey)	300.00
3	2 (Nan)	300.00
3	3 (Ploy)	300.00
3	4 (Tar)	300.00
5	1 (Mickey)	900.00
5	2 (Nan)	900.00
5	3 (Ploy)	900.00
5	4 (Tar)	900.00
5	5 (Beam)	900.00

TRANSACTION_ID	FRIEND_ID	AMOUNT
6	1,2,3,4,5	136.00 each
7	1,2,3,4,5	300.00 each
8	6 (Minnie)	480.00
8	7 (Gap)	480.00

Rows for tx 4 (2 splits) and the tx 6/7 five-way splits collapsed to one line each for space — full set is 24 rows, same pattern as tx 1's four.

settlements

net debts marked settled

3 rows

ID	EVENT_ID	FROM_ID	TO_ID	AMOUNT	SETTLED_AT
1	1	2 (Nan)	1 (Mickey)	612.50	2026-08-15 09:30
2	3	3 (Ploy)	1 (Mickey)	600.00	2026-09-22 18:05
3	3	4 (Tar)	5 (Beam)	150.00	2026-09-22 18:07

Settlements are between any two friends in the same event, not just "everyone pays the organizer" — Tar→Beam here is a direct peer debt.

Membership & media

Rosters for all four events, plus the two receipt photos actually attached.

participants

roster — no id, no timestamp, just the pair

13 rows

EVENT_ID	FRIEND_ID
1	1 (Mickey)
1	2 (Nan)
1	3 (Ploy)
1	4 (Tar)
2	1 (Mickey)
2	2 (Nan)
3	1 (Mickey)
3	2 (Nan)
3	3 (Ploy)
3	4 (Tar)
3	5 (Beam)
4	6 (Minnie)
4	7 (Gap)

receipts

Drive pointers — one row per photo

3 rows

ID	TRANSACTION_ID	FILE_ID	CREATED_AT
1	1 (Hotel)	1AbCxyz...QRst	2026-08-10 14:03
2	1 (Hotel)	1AbCxyz...WXYZ	2026-08-10 14:04
3	5 (Airbnb)	1DefGhi...MNop	2026-09-20 16:40

Transaction 1 has two receipts — front and back of the hotel folio — proving the one-to-many shape actually gets used, not just theoretical.
